Customized frames

Customized frames

- for single or multi-layer materials (e.g. leather, foam and fleece).
- ideal for automotive applications.
- adapted to material border, thus less waste of leather.
- Lightweight GFRP frames.
Higher embroidery quality due to lower mass driven by the pantograph.
- suitable for the use of the OPS2 camera.

Connection

Frames can be connected manually or via a pneumatic connection. The second option reduces downtime and increases efficiency and usability.

Manual clamping

Single or multi-layer materials can be clamped magnetically or via various manual clamping mechanisms, with the selection matched to the desired shape and embroidery design.

Pneumatic clamping

Pneumatic cylinders ensure that all clamps are closed with a single operation. This significantly increase efficiency in production.

It also ensures that all clamps are closed, which prevents scrap parts as well as collisions between the frame and the embroidery head.

Operating

Pneumatic clamps can be operated by hand valve or by electric foot pedal.
